9 Multithreading In Java

10 Exception Handling

11 Validation using Swing

11.1 Aim

- Create a Swing form with fields phone number and email ID
- Validate the fields

11.2 Code

```java
package org.projects.prog11;
import java.awt.GridLayout;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;

import javax.swing.*;

//11. Write a swing program for validating the form having a numeric field,
//character field, phone number, and email ID.

public class Swing {
  public static void main(String[] args) {
    JFrame frame = new JFrame("Swing Example");
    frame.setLayout(new GridLayout(3, 2));
    frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
    frame.setSize(300, 130);

    JTextField phoneNum = new JTextField();
    frame.add(new JLabel("Phone"));
    frame.add(phoneNum);

    JTextField email = new JTextField();
    frame.add(new JLabel("Email"));
    frame.add(email);

    JButton submit = new JButton("Submit");
    JLabel result = new JLabel();
    result.setHorizontalAlignment(JLabel.CENTER);

    submit.addActionListener( new ActionListener() {
      public void actionPerformed(ActionEvent e) {
        String em = email.getText();
        String phone = phoneNum.getText();
        result.setText("invalid");

        if (em.isEmpty() || phone.isEmpty()) { return; }

        try {
          Long.parseLong(phone);
          if (phone.length() < 10) { return; }
        } catch (Exception error) { return; }

        if (!em.contains("@")) { return; }

        result.setText("Valid");
      }
    });
```

```
    frame.add(submit);
    frame.add(result);
    frame.setVisible(true);
  }
}
```

11.3 Output

12 Text Field in Swing

12.1 Aim

- Create a Swing program that accepts a number
- if the number is even add it to list1
- else add it to list 2

12.2 Code

```
package org.projects.prog12;
import java.awt.GridLayout;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;

import javax.swing.*;

public class Swing {
  public static void main(String[] args) {
    JFrame frame = new JFrame("Swing Example");
    frame.setLayout(new GridLayout(4, 2));
    frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
    frame.setSize(300, 130);

    JTextField number = new JTextField();
    frame.add(new JLabel("Number: "));
    frame.add(number);

    JLabel list1 = new JLabel();
    list1.setHorizontalAlignment(JLabel.CENTER);
    frame.add(new JLabel("List 1"));
    frame.add(list1);

    JLabel list2 = new JLabel();
    list2.setHorizontalAlignment(JLabel.CENTER);
    frame.add(new JLabel("List 2"));
    frame.add(list2);

    JButton submit = new JButton("Submit");

    submit.addActionListener( new ActionListener() {
      public void actionPerformed(ActionEvent e) throws NumberFormatException {
        int num = Integer.parseInt(number.getText());
        number.setText("");
        if (num % 2 == 0) {
          list1.setText(list1.getText() + " " + num);
        } else {
          list2.setText(list2.getText() + " " + num);
        }
      }
    });

    frame.add(submit);
    frame.setVisible(true);
  }
```

```
}
```

12.3 Output

13 Traffic Light Simulation

13.1 Aim

- Create a Swing form with fields phone number and email ID
- Validate the fields

13.2 Code

```
package org.projects.prog13;
import java.awt.Color;
import java.awt.GridLayout;
import java.awt.event.ActionEvent;
import java.awt.event.ActionListener;

import javax.swing.*;

//13. Write a java program to simulate a traffic light. The program lets the user
//select one of the three lights: red, yellow, or green. On selecting a button,
//an appropriate message with "Stop", \Ready" or \ Go" should appear above the
//buttons selected color.

public class Traffic {
  public static void main(String[] args) {
    JFrame frame = new JFrame("Traffic");
    frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
    frame.setLayout(new GridLayout(2, 1));
    frame.setSize(300, 130);

    JLabel sign = new JLabel();
    sign.setHorizontalAlignment(JLabel.CENTER);
    frame.add(sign);

    JPanel panel = new JPanel();
    panel.setLayout(new GridLayout(1, 3));

    JButton red = new JButton("STOP");
    red.setBackground(Color.RED);
    panel.add(red);

    JButton yellow = new JButton("READY");
    yellow.setBackground(Color.YELLOW);
    panel.add(yellow);

    JButton green = new JButton("GO");
    green.setBackground(Color.GREEN);
    panel.add(green);

    ActionListener on_click = new ActionListener() {
      public void actionPerformed(ActionEvent e) {
        sign.setText(((JButton) e.getSource()).getText());
      }
    };

    red.addActionListener(on_click);
    yellow.addActionListener(on_click);
    green.addActionListener(on_click);
```

```
    frame.add(panel);
    frame.setVisible(true);
  }
}
```

13.3 Output

14 Applet In Java

14.1 Aim

- Create a Swing form with fields phone number and email ID
- Validate the fields

14.2 Code

```
package org.projects.prog14;

import java.applet.*;
import java.awt.*;
import java.awt.event.*;

public class Tables extends Applet implements ActionListener {
  TextField t1;
  Button t2;
  String[] result;

  public void init() {
    t1 = new TextField(5);
    t2 = new Button("Submit");
    t2.addActionListener(this);

    result = new String[10];

    add(new Label("Enter a number"));
    add(t1);
    add(t2);
  }

  public void paint(Graphics g) {
    for (int i = 0; i < 10; i++) {
      g.drawString(result[i], 20, 40 + 20*i);
    }
  }

  public void actionPerformed(ActionEvent e) {
    int number = Integer.parseInt(t1.getText());
    for (int i = 1; i <= 10; i++) {
      result[i-1] = number + " x " + i + " = " + i * number;
    }
  }
}
```

14.3 Output

15 Savings Account

15.1 Aim

- Create a Swing form with fields phone number and email ID
- Validate the fields

15.2 Code

```
package org.projects.prog15;

//15. Write a Java program to define Account class. Derive Saving_Account class
//from Account class. Define appropriate constructors for both classes. Define
//the following methods in the Saving_Account class:
//  Display( ): To display account details including account number and balance in
//  the account.
//  Deposit( ): To deposit money in an account.

class Account {
  public String accName;
  public long accNumber;

  Account (String name, long number) {
    accName = name;
    accNumber = number;
  }
}
